

cut

Cut is a family of lamps characterized by a main body that can be oriented in a stable manner in several positions. A laser-cut aluminum structure folded in several points connects two elements: the light source embedded in a circular metal support and a ring that mounts a semi-transparent diffuser disk. The two elements face each other, so that the light emitted by the light source is filtered and partially reflected by the screen. In this way, Cut never dazzles, whatever the orientation of the lamp. In the Cut table version it can take on three different positions, in the floor or suspension version the main body can be attached to the three-point support. The Cut family of lamps brings an emotional light and a refined and singular design into space.

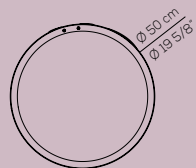

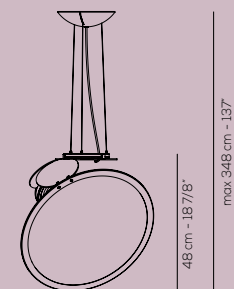

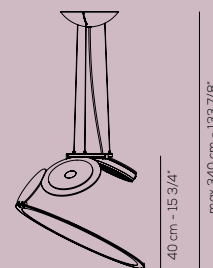

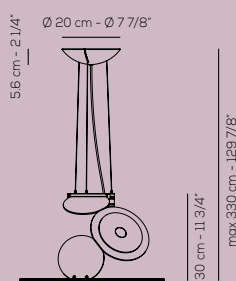

Cut è una famiglia di lampade caratterizzate da un corpo principale orientabile in modo stabile in più posizioni. Una struttura in alluminio tagliato a laser e piegato in più punti connette tra loro due elementi: la fonte luminosa incassata in un supporto metallico circolare e un anello che monta un disco diffusore semitrasparente. I due elementi si guardano frontalmente, di modo che la luce emessa dalla fonte luminosa venga filtrata e parzialmente riflessa dallo schermo. In questo modo Cut non abbaglia mai, quale che sia l'orientamento della lampada. Nella versione da tavolo Cut può assumere stabilmente tre posizioni diverse, nella versione da terra o a sospensione il corpo principale può essere agganciato al sostegno in tre punti. La famiglia di lampade Cut porta nello spazio una luce emozionale e un design raffinato e singolare.
